

# MANUSHI DAGLI

Vadodara, India | +91-94266-18679 | [manushidagli2512@gmail.com](mailto:manushidagli2512@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Medium](#)

## PROFESSIONAL SUMMARY

Software Engineer with 2+ years delivering feature-level work end-to-end across GenAI services, distributed backends, and full-stack systems serving Fortune 500 enterprise clients. Skilled across the entire product surface — architecture, backend, frontend, and optimization — with deep experience in RAG, AWS, and scalable system design. Comfortable mentoring peers, leading by influence, and coordinating directly with external vendors and cross-functional stakeholders.

## TECHNICAL SKILLS

**Languages:** Python, TypeScript, JavaScript, Java, C++, SQL

**Backend & APIs:** FastAPI, Flask, Node.js, Spring Boot, REST APIs, Microservices, RBAC, JWT Authentication, RabbitMQ, Apache Kafka

**Frontend:** React, TypeScript, Design Systems, Strapi CMS

**AI / ML:** RAG Architectures, LangChain, LLM Integration, Embeddings, Vector Databases, Prompt Engineering, AWS Rekognition

**Databases:** PostgreSQL, PgVector, MySQL, MongoDB, Redis

**Cloud & DevOps:** AWS (Rekognition, EC2, S3), Docker, GitHub Actions, CI/CD Pipelines, SonarQube

**Testing:** Pytest, Jest, Vitest, Apache JMeter (Load Testing)

**Tools & Methodologies:** Agile/Scrum, Git, Jira, Confluence

## PROFESSIONAL EXPERIENCE

**Software Engineer – 1 · Jeavio (India) Pvt. Ltd.** · Vadodara, India

May 2025 – Present

- Owned end-to-end delivery of a production AI/ML service — a Python-based Facial Recognition microservice on AWS Rekognition adopted across 3 product lines — introducing a new language stack to the team and halving inference time in a follow-up optimization.
- Demonstrated ruthless prioritization and shipping velocity by delivering a production-grade AI Analytics MVP end-to-end in 3 days, from scoping through staging deployment and feedback incorporation.
- Led high-risk, system-wide changes without disrupting existing functionality — including a complete redesign of the platform's authorization framework (multi-role RBAC) and a foundational change to the user identity model.
- Designed and delivered cross-boundary integrations with multiple third-party vendors, owning API design, stakeholder coordination, and integration delivery across time zones.
- Owned production reliability and live incident response across 5+ Fortune 500 client events at 100K+ concurrent-user scale, voluntarily stepping in for urgent incidents and sustaining zero downtime under peak load.
- Built engineering rigor into the team's delivery process — driving pre-launch load testing with Apache JMeter, authoring scalability-recommendation documents, and introducing static-analysis tooling (SonarQube, ESLint/Prettier standards) to raise code quality across the codebase.
- Acted as a force multiplier for the team: built a component-based Design System to accelerate frontend delivery, and mentored 2 engineers (one junior, one senior) through onboarding.
- Drove team-wide visibility and knowledge sharing by initiating a bi-weekly tech-sharing forum and presenting in 2 organization-wide sessions.

**Associate Software Engineer · Jeavio (India) Pvt. Ltd.** · Vadodara, India

May 2024 – May 2025

- Designed and shipped production-grade GenAI systems using RAG with LangChain and PgVector, improving context retrieval accuracy by 15–20% through embedding strategy and ingestion-pipeline tuning.
- Built LLM observability and evaluation discipline into the team's workflow — benchmarking models across OpenAI and Anthropic, designing intent detection strategies, and reducing inference latency and token usage in hybrid retrieval systems.
- Enforced Responsible AI and data privacy across model endpoints by integrating secure authentication, RBAC, and compliant access controls — making security a first-class concern, not an afterthought.
- Optimized backend data layer for high-throughput AI workloads by designing PostgreSQL schemas and tuning PgVector indexes for efficient similarity search over large-scale document corpora.

## PROJECTS

**Distributed Job Scheduler with Workflow DAGs** — Python (FastAPI), PostgreSQL, RabbitMQ, Redis, Docker — MVP

- Building a self-hosted job orchestration service with REST-submitted task DAGs; the scheduler resolves dependencies via topological sort and dispatches ready tasks to workers through RabbitMQ for parallel execution, with state-machine tracking and safe recovery after worker crashes.
- Implemented retry logic with exponential backoff, idempotent execution, and cascading failure propagation; containerized via Docker Compose and wired up GitHub Actions CI.

**Digital Curriculum & Resource Management Platform** — Java Spring Boot, React, MySQL, JWT, Apache Kafka

- Built a secure, multi-tenant Resource Management Platform with strict data isolation, implementing RBAC and JWT-based authentication to prevent unauthorized cross-tenant access.
- Integrated Apache Kafka for event-driven communication between microservices, enabling real-time curriculum updates and minimizing inter-service API coupling.

**AI-Driven Reimbursement Platform** — Python, LLM APIs, REST, Document Parsing

- Created an AI-powered reimbursement automation tool (Jeavio Tech Challenge) using LLM-based document parsing with structured output validation, reducing manual HR processing effort by 60%.

## EDUCATION

**Bachelor of Technology in Information Technology**

Aug 2020 – May 2024

Dharmsinh Desai University, Nadiad, India · GPA: 8.80 / 10.00

## LEADERSHIP & ACTIVITIES

- Event Lead, CodeChef Chapter (Dharmsinh Desai University):** Organized competitive programming contests in partnership with CodeChef, mentoring 100+ students in algorithmic problem-solving and data structures.
